

Enterprise Hosting Infrastructure as a Service (IaaS)

Enterprise Backup Safeguard Your Valuable Data

Overview

Enterprises face the unprecedented need for data retention to protect their critical and valuable data against threats of loss or corruption. NTT Com Asia's Enterprise Backup service in our Infrastructure as a Service (IaaS) series is a subscription-based service that secures your data and mitigates business risks with the provision of virtual / physical server backup and data restoration when needed. Our fully-managed server data backup service will meet your business needs of service availability and business continuity.

Leveraging on NTT Com Asia's highly available architecture and redundant network infrastructure with enterprise-class Storage Area Network (SAN), this server backup solution can help you to minimise downtime by scheduling backups to safeguard your data and to restore it. Specially designed for data centres and for hosting customers, the service is available to both physical and virtual servers. Data backup and recovery are managed via a dedicated private network to ensure maximum security.

Features & Benefits

High Level of Security

- The highly-secure data backup service is provided on a private, non-routable local area network segment, and housed in our data centre with ISO 27001/9001 certification

Unsurpassed Performance

- Safeguarding your critical business data with high performance and restoration capabilities in a LAN environment, with reliable and market-leading backup solution technology, Symantec NetBackup

Highly Efficient

- Flexible data backup and scheduling options, including retention period and data size, can be customised to meet different objectives based on data value

One-stop Management

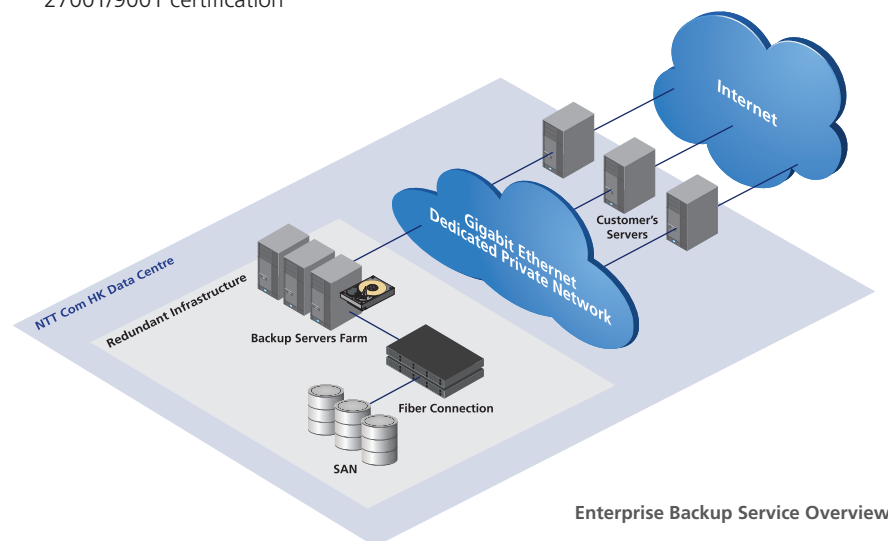

- Around-the-clock monitoring of the server backup environment managed by NTT Com Asia's experts; enhanced efficiency with one-stop license management

Reduced Total Cost of Ownership

- On-demand service model enables high flexibility without additional capital investment

Business Continuity

- Enterprise Backup service enables business data to be centrally managed and restored online in the event of emergencies, minimising the impact of downtime
