

Dedicated Hosting

House your asset at where you can count on

A HIGHLY AVAILABLE, SCALABLE AND FLEXIBLE SERVICE THAT OFFERS YOU PREMIUM IT INFRASTRUCTURE.

NTT Communications Dedicated Hosting is a highly available, scalable and flexible service that offers our premium IT infrastructure on a subscription model.

We provide a full range of dedicated devices hosting including:

- **Dedicated Server**
Providing dedicated server hosting and server OS that enables customers to house applications and data.
- **Dedicated Firewall**
Providing rental firewall devices to protect our customers' network from unauthorised access and to keep it secure and policy-compliant.
- **Dedicated Unified Threat Management (UTM)**
Providing comprehensive threat management solution service, which protects the company's network against application and network threats, as a complement to existing solutions or as an all-in-one security gateway.
- **Dedicated WAN Performance Acceleration (WPA)**
Assisting in the acceleration of application and network performance across WAN by using WAN Optimisation Controllers, and through the fine-tuning of protocols and prioritisation of throughput improvement; without changing the current network setup.
- **Dedicated Load Balancer**
Providing managed server load balancing service that distributes workload across multiple servers.
- **Dedicated Switch**
Providing rental network switches to ensure LAN performance, reliability and security.
- **Dedicated Router**
Providing rental network routers that manage network routing.
